Configure in Platforms

Version: 20210602

Contents

You can easily create smart products on the Tuya IoT Platform. A smart product has a globally unique identifier—Product ID (PID). The product contains all the metadata of the smart device you deploy in the actual scenario, including the core and basic functional attributes in product development. The metadata also includes customized support services. The following topics describe how to create a smart product on the Tuya IoT Platform, and configure the whole process until the smart product is put into production.
