

## Update App Version

Version: 20240613

## Contents

<b>1</b>	<b>Create version</b>	<b>2</b>
<b>2</b>	<b>Launch the updated app</b>	<b>7</b>
2.1	Method 1: Purchase App Launch service . . . . .	7
2.2	Method 2: Launch app by yourself . . . . .	7

This topic describes how to update an OEM app for your brand.

## 1 Create version

1. Go to [App Creation](#).
2. In the list of **OEM apps**, find the app to be updated and click the app name to enter the overview page.

OEM App Create App

App	App Type	Latest Version	App Plan	App Created/Updated At	Operation
 <b>Test App</b>	Smart Life	Latest Version: v1.0.0 <a href="#">Built</a>	Update-Only Edition -	2021-07-16 11:02 2024-01-19 14:58	<a href="#">Configure</a> ...

**Figure 1:** img

- If the app update service is within the validity period, perform the following

steps:

1. Click **Create Version**.

2. Set the new version number.

By default, the latest version number is the earlier version number **plus 1**. You can modify this version number. We recommend that you iterate the minor version.

Describe the problem you encountered

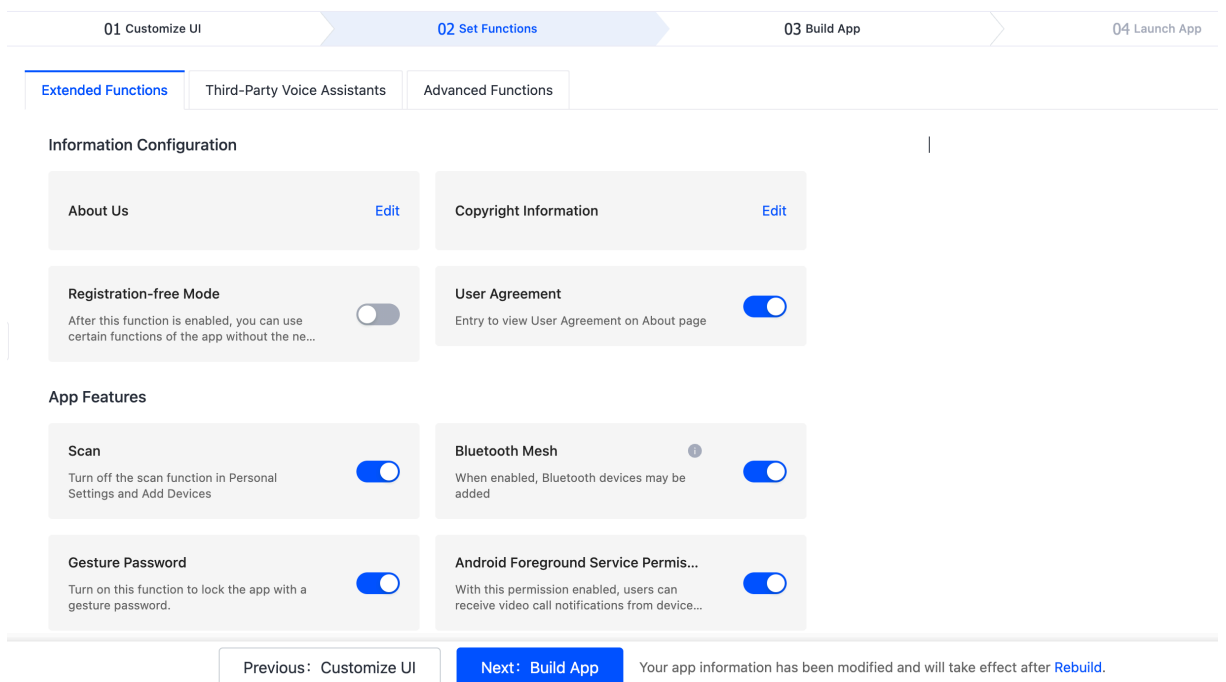

Search

5. Check the UI configurations. You can modify them as needed. Confirm all configurations and click **Next: Set Functions**.

- Go through the steps to **Set Functions**. Then, click **Next: Build App** at the bottom of the page to build your app.

Each version can be built up to 10 times a day and up to 30 times a month.

- After the build, you can click **Get QR Code of Android Test Package** in the **App Test Package** section as shown in the figure to get and scan the QR code,

The QR code is only used for testing this version and cannot be used for product exterior packaging or distributed to end users.

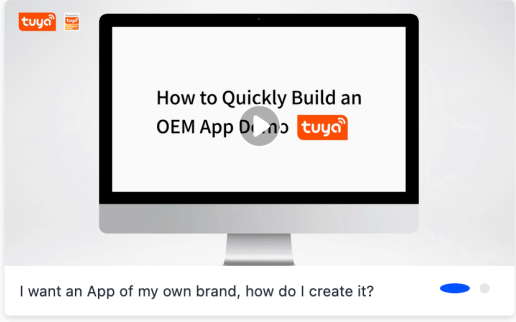

8. If the build timed out without any response, the build might fail due to improper configurations. You can contact Tuya' s staff for consultation.

If you have any problem during the configuration, you can click **Help and Services** > [Submit Question](#) for troubleshooting.

## 2 Launch the updated app

### 2.1 Method 1: Purchase App Launch service

1. Click **Next: Launch App > Purchase** next to the **App Launch** service.

**App Launch—Fully-Managed App Launch Service**

Provide fully-managed app launch services. Required content is prepared for launch to minimize the launch time. The app push notification function is enabled.  
Services: map-based positioning configuration, app platform push certificate preparation, launch content preparation, launch material review, confirm finished launch and review result notification.

**Get Launch Package**

Launch Package for iOS

Note: Provide a complete installation package for iOS for a launch on the App Store.  
Notice: Certain features can be accepted only after the app is uploaded to TestFlight ([What is TestFlight?](#)) or launched to the App Store. Such features include push notifications and Sign in with Apple. Please accept these features as needed in time. If any problem arises, [click here to troubleshoot it](#).

Scope: App Store only

View Docs: [Release Apps for iOS](#) [App Store Version Updates](#)

Launch Type: ☒ Auto Upload  
After simple configurations for the launch, the package is automatically uploaded. You do not need to install dedicated tools to upload the package. This accelerates the upload process and minimizes the errors that might occur during the upload. Auto upload does not mean launching your app. You need to log in to App Store Connect to complete the information, then submit it to Apple for review.

☐ Manual Upload  
After you download the installation package for iOS, you must install a dedicated tool to upload the installation package. The manual upload takes longer than the auto upload. For more information, see [Launch an App for iOS](#).

Operation: [Upload Installation Package](#)

Launch Package for Android

Type	Android (Mainland China)	Google Play-Specific
Note:	Provides comprehensive capabilities. The mainland China-specific package provides more services than the Google Play-specific package to meet the requirements of users in mainland China. These extra services include push notification services through multiple channels such as Umeng, Xiaomi, OPPO, vivo, Huawei, and Meizu, AutoNavi, and login with accounts of social media apps such as Tencent QQ and WeChat.	Compared with the mainland China-specific package, the Google Play-specific package does not include the services that are required by users in mainland China. Benefit: The size of the installation package is decreased. This increases the app approval rate in Google Play.
Scope:	Recommended for launches in app stores for Android in mainland China.	1. Recommended for launches to Google Play. 2. Recommended for launches in app stores outside mainland China.

[Previous: Build App](#) [Confirm Finished Launch](#)

2. Purchase the [App Launch](#) service.

After you purchase the App Launch service, you only need to wait for Tuya's staff to contact you and provide services. The subsequent steps will be finished by Tuya's staff without your additional operations.

### 2.2 Method 2: Launch app by yourself

1. You can download the launch packages from the platform. For more information about launching on different app stores, see the hyperlinked documents as shown in the following figure.

To pass the strict review of apps for iOS, carefully read the operation manual and launch your app with respect to the specifications.

2. If you have any problem during the launching of the app, you can [submit a ticket](#) for troubleshooting.

- After your app has passed the review, click **Confirm Finished Launch** at the bottom of the page to confirm that the app has been launched on app stores.

**App Launch—Fully-Managed App Launch Service**

Provide fully-managed app launch services. Required content is prepared for launch to minimize the launch time. The app push notification function is enabled.
